Customers say
“The huge choice of flavours means I never get tired of using Formula 1.”
A vegan diet calls for careful meal planning to ensure all recommended daily nutrients are in the mix. Taking supplements for protein, vitamins and minerals can help to plug any gaps.
Plan ahead to get ahead

When adopting a vegan diet you need to make up proteins and essential amino acids readily available in meat, as well as Vitamin D and calcium normally obtained from dairy.

Protein can be found in plant foods such as beans, lentils, whole grains and soy-based tofu. However, unlike most animal proteins, so called “complete” because they contain all nine essential amino acids, most plant foods lack one or more (except for soybeans). So consuming a wider variety of foods is essential. For example, the essential amino acid lacking in beans, peas and lentils is abundant in whole grains. And, conveniently, what grains lack, the beans can provide.
Balancing protein

and why it’s important

As protein serves so many important bodily functions, it’s crucial you get your daily intake right, based on your weight and muscle mass. Protein is a macronutrient made up of 21 ‘building blocks’ called amino acids, which support muscle mass growth, and muscle and bone maintenance.

The right balance

The most accurate method to calculate protein requirement is with your lean body mass (weight without fat content), but you can just use your overall body weight as a guide. The calculation using body weight in kg, is to multiply that weight by 1.5 and this gives a reasonable target for your daily protein intake in grams. So, someone who weighs 64kg should aim for about 100g of protein a day.
Protein sources

Soy is one of the best vegetable sources as it is a ‘complete protein’ providing all 9 essential amino acids. Others are nuts, seeds and lentils but as ‘incomplete proteins’, you’ll need to include varied sources to garner the benefits that each provides. You can be confident when using our range of healthy shakes, that they contain the complete proteins needed to support your nutritional needs.

Upping your protein

As a rough guide, common sources of protein food contain around 25 g of protein and protein snacks (e.g. Herbalife Protein Bars) contain around 10 g. If you need to up your protein, meal replacement or protein shakes can bridge that gap, and be tailored to your personal needs. Look at Formula 1 Healthy Meal, Formula 1 Savoury Meal or Tri Blend Select and Protein Drink Mix for vegan friendly options.
Meet your protein needs

Keeping up with your daily protein intake can be easy.

Our range of protein products are a convenient way to ensure your daily recommended protein levels stay on target.
Protein Drink Mix
A delicious high quality protein shake that can be mixed with Formula 1 or enjoyed on its own.

- 15 g protein

Immunity support

Much is yet to be learned about the immune system, but we do know it is linked to nutrition and gut health.
What we eat, where we live, how much we sleep, how we exercise, and even who we live with, all cause chemical reactions that can affect our body.

Around 70-80% of body’s immune cells are located in the gut* our immune system is located near the intestines, which monitors food intake and how the body uses it. So, it critical for our diet to include the right vitamins, minerals, and other nutrients while maintaining a healthy lifestyle.

The four essential groups of nutrients to help strengthen your immune system are protein, vitamins and phytonutrients, probiotics and prebiotics and Omega-3 fatty acids.

Our vitamins and minerals product range can help balance your diet to maintain a healthy immune system.

* Wiertsema SP et al, Nutrients. 2021; 13(3)
Smart nutrition for your immune system
Pro Core

High in Vitamin C with Vitamin D, selenium and zinc, to help support immune system function and protect cells from oxidative stress. Over a dozen published studies show EpiCor® fermentate helps to deliver immune health and gut health benefits1.

1 Seven published preclinical studies and eight published human clinical trials.
Fine tune your diet

Vitamins and minerals are key micronutrients essential for many everyday chemical reactions performed by your body.

While a balanced diet is the best way of obtaining these nutrients, it’s not always manageable to ensure our food contains the necessary levels. Taking vitamin and mineral supplements is a convenient way to keep up with your recommended daily amount.

**Vitamin & Mineral Complex**

**Men & Women**

Designed specifically for the needs of men and women, this is an all-round nutritional support with 24 key nutrients, including micronutrients your body itself can’t generate or sustain. Created to work with your favourite Formula 1 shake. *

- **Vitamin D**
- **Calcium & Magnesium**

90 tablets, 133 g  #0020
Saturated is bad.
Polyunsaturated is good...
It’s a little more complex than that.

Today, we know it’s more about achieving fat balance, especially between omega-3 and omega-6 polyunsaturated fats. The right amount (250 mg daily) of omega-3 fatty acids, EPA and DHA, contribute to the maintenance of normal vision and brain function, and also contribute to the normal function of the heart.

The western diet

The typical western diet provides an excess of total and saturated fat, without enough of the healthy kind, such as fats from fish, nuts, olive oil and avocados.

As a concentrated source of calories, Herbalife Philosophy recommends limiting your fat intake to not more than 30% of your daily calories.

Fish oil is linked to brain health, so aim to eat two portions of fatty fish, such as sardines, salmon, or trout, weekly. The long-chain omega-3 fatty acids (EPA and DHA) found in fish, is not efficiently produced by the body, so we need them from food. It also helps to support heart health. Not fussed on fish? Then a dietary supplement can help.
Herbalifeline® Max

Rich in Omega-3 fatty acids

This potent food supplement delivers increased levels of omega-3 fatty acids, EPA and DHA (per capsule), which support heart¹, vision² and brain² function. A vegetarian gel capsule with the addition of thyme and peppermint essential oils to help freshen the taste.

- 375 mg of EPA per capsule
- 250 mg of DHA per capsule

30 capsules, 42 g #0043

Recommended use

- Maintenance of normal heart¹ function
- Maintenance of normal vision²
- Maintenance of normal blood triglyceride levels³
- Maintenance of normal blood pressure⁴

† On average 3 times more EPA and DHA compared to the current Herbalifeline formula. ¹Beneficial effect obtained with daily 250 mg intake of EPA and DHA; ²Beneficial effects obtained with daily 250 mg intake of DHA; ³Beneficial effect obtained with daily 2 g intake of EPA and DHA; ⁴Beneficial effect is obtained with a daily 3 g intake of EPA and DHA; A supplemental daily intake of 5 g of EPA and DHA combined must not be exceeded.

Your body loves fibre
Fibre is the thing that helps maintain normal gastrointestinal function.

It’s a type of carbohydrate, which can’t be broken down by the human digestive system, so most passes undigested, through the small intestine, providing bulk.

Although it’s such an important dietary component, the average person consumes less than half the daily recommended amount of 25g. Our fibre-rich supplements can help boost your intake, although it’s best to increase slowly alongside drinking plenty of water.

---

Oat Apple Fibre

A delicious way to increase daily fibre intake to support healthy digestion and can be enjoyed with water or mixed with your favourite Formula 1 shake.

5 g fibre  No artificial sweeteners  Sugar free  18 kcal per scoop

30 servings, 204 g  #2554
Give to your gut
For healthy digestion
The idea of consuming bacteria is not appealing until you appreciate the benefits and how easy it is to supplement them in your diet!

What you eat plays such a crucial part in looking after the health of your gut and its resident micro flora which work together to help your two brains work symbiotically together. That’s right, we have a ‘second brain’ -our complex digestive system, which sends and receives information to and from our ‘first brain’ and using it to regulate the digestive function. Prebiotics are high fibre foods such as fruit, vegetables, beans, and whole grains, and are the life force for probiotics influencing other organs and systems in the body, helping to keep blood sugar and cholesterol levels within the normal range. Humans lack the ability to break down certain carbohydrates and fibre, so the microbes in your gut do the job for you.

Your source of prebiotics

Today’s busy lifestyles means many of us aren’t eating enough food with good sources of prebiotics. Ideally, your body needs a combination of prebiotics and probiotics, which is why taking supplements is so important. Probiotics stimulate the growth and activity of the good bacteria in your digestive tract - the same bacteria that has been taken from foods or supplements. A rich source of good bacteria is found in fermented food such as yogurt and kefir, where they convert sugar and carbohydrates into acids. They all have a part to play in enhancing the body’s immune response control and are believed to have a positive effect on mood.
The human body is almost 70% water, so it stands to reason that we need to keep well-hydrated to stay healthy.

Our bodies require enough water to perform the vital function of digesting foods. Nutrients can be delivered to your cells, and waste substances can be eliminated.

Water also plays a huge role in controlling body temperature, keeping joints lubricated, and maintaining muscle power. The bottom line is every cell, tissue, and organ needs water to function properly. It’s basic body housekeeping.
Top tips for staying hydrated

1. Make it accessible
   Put a jug, glass or bottle of water wherever you are – at your desk, by your bedside, on the kitchen work top.

2. Take it with you on the go
   Invest in a re-usable bottle, so water is always on hand.

3. Drink before you eat
   Hunger can sometimes be mistaken for thirst, so try a glass of water first - before adding to the calories unnecessarily!

4. Flavour it
   Plain water can be hard to drink, flavour it naturally with a slice of fresh lemon or lime, some cucumber, fresh mint or try adding our mango flavoured Herbal Aloe Concentrate for a convenient alternative.

5. Eat it
   Hydrating fruits and vegetables like cucumbers and watermelons contribute to your daily fluid intake. Low fat milk, tea, coffee and juice can also contribute. Our Instant Herbal Beverage range is perfect if you also want a pick-me-up with 85 g caffeine.

Treat your hair to an intensive conditioning treatment – leave Herbal Aloe Conditioner to soak in for 3 minutes before rinsing for hair that’s super-soft and shiny.

Herbal Aloe Everyday Soothing Hand & Body Lotion
- Clinically shown to hydrate skin for deep nourishment
- Aloe Vera and African shea butter absorb quickly and leave skin feeling soft and smooth
200 ml #2563
It's a good idea to invest some time in tailoring a workout that meets your goals - whether it's to build fitness, lose weight or support your mental health. Your Herbalife Coach can really help with their experience and guide you to a measured plan to suit your objectives. Formula 1 Sport has been specially formulated to get you started on your fitness journey.

Restricting your hard workout regimes to 3-4 days a week and allowing a rest day or two is the way to go, while being conscious of the need to combine this with balanced nutrition. Use H24 Restore for recovery whilst you sleep.

If you're keen to spend more time working out, e.g. 50-60 minutes daily, you'll have more time to warm up and cool down, workout at an enjoyable pace, stay hydrated, incorporate additional work outs, keep an exercise journal and the big one - more time to focus on your self-care.

For best results, it pays to keep your routine consistent. See it as part of an overall wellness strategy to improve how you live your life. And always listen your body.

Know your limits.
While it's good to spend more time working out, over-exercising can be counterproductive, and in severe cases can lead to exhaustion, dehydration and even serious injury. Be sure to stay hydrated with H24 Hydrate.
For some, a 30-minute workout is perfect. For others, a longer training session is necessary to reach fitness goals.
Customers say
“LiftOff immediately gives me charge and energy!”
Feel refreshed and enjoy the sharp, zesty taste of lemon & lime. Take before exercising or whenever you need to get back on track.

Lemon & Lime 10 sachets x 4.5 g, 45 g #3152

Setting the standard
There’s a reason Herbalife is classed as the #1 brand in the world in weight management and wellbeing.

Our products are designed by science to support personal health and nutrition goals, along with our Herbalife24 brand specifically developed to support the nutritional needs of athletes, gym-goers and fitness enthusiasts.

**Highest quality ingredients**

We use only the finest quality ingredients from farmers who lead the charge in their high standards for planting and conservation. After all, quality ingredients produce premium products trusted by our customers. Our products, manufacturing, and business model have received numerous international awards, gold-stamping our high-quality standards.

ISO 17025 certifies the technical capability of labs and consistency in results.

The Herbalife24® products are batch tested for prohibited substances by an independent third party. For more information, please see the product label.
Backed by science

* The Nobel Foundation has no affiliation with Herbalife and does not review, approve or endorse Herbalife products.
World-class experts
Our products are backed by science and a global network of over 300 experts and doctors in nutrition, science and health who ensure quality and stringent compliance with government regulations. Guided by research, driven by quality, with no compromises, we deliver excellence on every level.

Tried and tested
Test, retest, and test again - that’s what we do! Internally and through third party certifying organisations, we get validation that our products are best in class.
Great products win great awards
Our dedication to innovation and science has made it possible for our products to be awarded across the world.

From seed to feed
Great products grow from great ingredients

At Herbalife, we guarantee the highest quality products by following our in-house “from seed to feed” production and quality assurance process.

We invest in responsible cultivation methods and our team of worldwide dedicated scientists and producers are committed to sourcing the best raw materials. Every ingredient goes through in-house analysis to ensure it meets strict specifications. From tea farms in China and aloe farms in Mexico to soybean farms in the U.S., we use the finest ingredients to develop outstanding products.

Every effort is made to ensure that Herbalife products meet or exceed our own quality standards and the standards of our industry. The purity and nutritional value of each ingredient is without question as is the integrity of the processes we follow.
Herbalife Foundation (HNF)

Thanks to the support of Members and employees, HNF provides millions of dollars in funding to 167 orphanages, hospitals, schools, and organizations in more than 59 countries. In 2021 alone, we served more than 216,000 children and their communities.

Nutrition for Zero Hunger (NFZH)

Working towards Zero Empty Plates. Our NFZH initiative aligns with the United Nation’s Sustainable Development Goal #2 – Zero Hunger. It calls for bold action to end hunger by 2030, to achieve food security, improved nutrition and promote sustainable agriculture.

To help make it happen, we support organisations that tackle these issues, such as Feed the Children, The Hunger Project, and the Power of Nutrition.
